#### Abstract

Regioselective cyclizations of the condensation products obtained by the reaction of nitrogen nucleophiles with ketene dithioacetals or alkoxymethylene compounds are reported. Stereoelectronic factors or geometry of the carbon-carbon double bond determine the regioselectivity of heterocyclization processes.

The synthesis of substituted pyrimidines from thioamides and methoxymethylene compounds or ketene dithioacetals has been previously reported. ${ }^{1-4}$ The reaction proceeds through the condensation product which cyclizes regioselectively by attack of the sulfur to the cyano group, none of the product resulting from cyclization at the alkoxycarbonyl group being isolated. Regioselective cyclization can be attributed to stereoelectronic control or alternatively to the configuration of the carbon-carbon double bond of the condensation product.

## Scheme 1

With the purpose of discerning the factors which determine the regioselectivity of these heterocyclization processes, in this paper we describe the reactivity of benzamide, thiobenzamide, benzamidine and thiourea with alkoxymethylene compounds or ketene dithioacetals.

## SYNTHESIS OF PYRIMIDINES FROM AMIDES OR THIOAMIDES

Firstly we carried out the reaction of benzamide or thiobenzamide with the methyl 2-cyano-3-methoxy-3-phenylpropenoate (1), which afforded methyl (Z)-2-cyano-3-benzamido(or thiobenzamido)-3-phenylpropenoates ( $2 \mathbf{a}, \mathrm{~b}$ ).

Scheme 2

1
2a: $X=S$
$2 b: X=O$

The configuration of the C3-C4 double bond, of adducts (2a) and (2b) was established from XRay diffraction and ${ }^{1} \mathrm{H} n \mathrm{nr}$ respectively.

Figure 1. Model illustration of 2a

Figure 2. Ortep view of $\mathbf{2 a}$

Table 1 shows selected geometric parameters for $\mathbf{2 a}$. Bond angle values show that N 1 is $\mathrm{sp}^{2}$ hybridized although the $\mathrm{NH} . . . \mathrm{O}=\mathrm{C}$ hydrogen bond ( $\mathrm{O} 1-\mathrm{N} 1$ and $\mathrm{O} 1-\mathrm{H} 1$ distances are 1.893 and $2.678^{\circ} \mathrm{A}$, respectively) contracts the $\mathrm{H}(1)-\mathrm{N}(1)-\mathrm{C}(3)$ bond angle whereas the $\mathrm{C}(3)-\mathrm{N}(1)-\mathrm{C}(1)$ angle
is correspondingly expanded. This hydrogen bond causes the methoxycarbonyl group to deviate from the coplanarity with the C3-C4 double bond. Torsion angle values show that the phenyl group on C3 is conjugated with the C3-C4 double bond. In the same fashion the nonbonding electrons of N 1 are conjugated with the thiobenzoy! group, whereas the conjugation with the C3C4 double bond and phenyl group on C3 is disminished. One of the factors which stabilizes the Zgeometry of the C3-C4 double bond is the hydrogen bond between the N-H and methoxycarbonyl group.

Table 1. Selected geometric parameters for compound (2a).
Bond lengths ( $\left.{ }^{\circ} \mathrm{A}\right)$
Bond angles ( ${ }^{\circ}$ )
Torsion angles ( ${ }^{\circ}$ )

| $\mathrm{C}(1)-\mathrm{S}(1) 1.637(4)$ | $\mathrm{C}(1)-\mathrm{N}(1)-\mathrm{C}(3)$ | $129.7(4)$ | $\mathrm{S}(1)-\mathrm{C}(1)-\mathrm{C}(14)-\mathrm{C}(19)$ | $13.8(6)$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{N}(1)-\mathrm{C}(1) 1.352(6)$ | $\mathrm{C}(1)-\mathrm{N}(1)-\mathrm{H}(1)$ | $122.1(4)$ | $\mathrm{N}(1)-\mathrm{C}(1)-\mathrm{C}(14)-\mathrm{C}(15)$ | $10.4(6)$ |

| $\mathrm{C}(3)-\mathrm{C}(4) 1.355(7)$ | $\mathrm{S}(1)-\mathrm{C}(1)-\mathrm{N}(1)$ | $125.0(3)$ | $\mathrm{N}(1)-\mathrm{C}(3)-\mathrm{C}(8)-\mathrm{C}(9)$ | $-45.4(6)$ |
|  | $\mathrm{S}(1)-\mathrm{C}(1)-\mathrm{C}(14)$ | $121.3(3)$ | $\mathrm{C}(4)-\mathrm{C}(3)-\mathrm{C}(8)-\mathrm{C}(9)$ | $128.7(5)$ |
|  | $\mathrm{N}(1)-\mathrm{C}(1)-\mathrm{C}(14)$ | $113.6(4)$ | $\mathrm{C}(3)-\mathrm{C}(4)-\mathrm{C}(6)-\mathrm{O}(1)$ | $18.4(7)$ |

By refluxing 2a in methanol we obtained 5-methoxycarbonyl-2,6-diphenyl-4-thioxo-3,4dihydropyrimidine (3). The cyclization process entails an inversion of the geometry of the C3-C4 double bond.

Scheme 3

Under the same conditions the Michael adduct (2b) does not undergo cyclization but yields
methyl 3-amino-2-cyano-3-phenylpropenoate as described in the literature. ${ }^{5}$ This result can be explained by stabilization of the Z configuration owing to the hydrogen bond between the $\mathrm{N}-\mathrm{H}$ and $\mathrm{C}=\mathrm{O}$ groups.

Scheme 4

In a previous paper, ${ }^{4}$ we described the synthesis of 5-methoxycarbonyl-6-methylthio-2-phenyl-4-thioxo-3,4-dihydropyrimidine from methyl 3,3-bis(methylthio)-2-cyanopropenoate (4) and thiobenzamide by in situ cyclization of the intermediate. Under similar conditions the reaction of methyl 3,3-bis(methylthio)-2-cyanopropenoate (4) with benzamide affords methyl 3-benzamido-2-cyano-3-methylthiopropenoate (5). The $Z$ geometry of the carbon-carbon double bond was established from NOE experiments and is the opposite to that found in the adduct (2b). This can be explained by an attractive nonbonded $S . . . O=C$ interaction such as that found in related compounds. ${ }^{6}$ Treatment of 5 in methanol at reflux affords 5-methoxycarbonyl-6-methylthio-4-oxo-2-phenyl-3,4-dihydropyrimidine (6).

Scheme 5

In all cases studied two alternative cyclizations are posible, though only 5-alkoxycarbonyl-4thioxo(or 4-oxo)-3,4-dihydropyrimidines formed by a 6-exo-dig process were obtained. These results suggest that heterocyclization is controlled by stereoelectronic factors. The rigidity of the chain restricts the relative motion of the terminal groups and precludes the attack of the sulphur (or oxygen) above or below the carbonyl group. On the contrary, the nucleophile can attack the cyano function with a trajectory ${ }^{7}$ having an SCN angle of ca. $120^{\circ}$ without distortion of the chain.

Scheme 6

In order to asses this assumption we carried out the synthesis of dimethyl 1phenylmethylenemalonates ( 8) and (9). By refluxing 8 or 9 in methanol, unchanged starting materials were recovered whereas by stirring with sulfuric acid at room temperature dimethyl 1-amino-1-phenylmethylenemalonate ( $\mathbf{1 0}$ ) was isolated in both cases.

## Scheme 7

7
8: $R=\mathrm{CH}_{3} ; \quad X=S$
9: $\mathrm{R}=\mathrm{C}_{6} \mathrm{H}_{5} ; \mathrm{X}=\mathrm{O}$

Spectroscopic and physical data of 10 are in agreement with those previously reported. ${ }^{8}$
Likewise dimethyl 1-methylthio- 1 -thioacetamidomethylenemalonate (11) obtained from thioacetamide and dimethyl bis(methylthio)methylenemalonate does not cyclize in methanol at reflux.

## Scheme 8

11
These facts are additional proof of the stereoelectronic control in the cyclization of the condensation products obtained from amides or thioamides and alkoxymethylene compounds or ketene dithioacetals.

## SYNTHESIS OF PYRIMIDINES FROM BENZAMIDINE OR THIOUREA

The literature describes several regioselective cyclizations of adducts resulting from addition of amidines to methoxymethylene compounds, ${ }^{9,10}$ ketene dithioacetals ${ }^{11}$ and ketene $\mathrm{S}, \mathrm{N}$-acetals. ${ }^{12}$ With the objective to study in depth the regioselectivity of these processes, we carried out the reaction of the methoxymethylene compound (1) with benzamidine, which afforded 5-cyano-4-oxo-2,6-diphenyl-3,4-dihydropyrimidine (12) as the sole product of the reaction.

Scheme 9

Analogous results were obtained when ketene dithioacetal (4) was reacted with benzamidine.
Scheme 10

13

On the contrary, the reaction of ethyl 2-cyano-3-ethoxypropenoate (14) with benzamidine yields a mixture of the pyrimidines (15) and (16) resulting from the cyclization at the cyano and ethoxycarbonyl group respectively.

Scheme 11

14

The reaction of thioureas with alkyl benzylidenecyanoacetates affords a route to the synthesis of 2-thiodihydrouracils. ${ }^{13} \mathrm{~S}$. Kambe et al. ${ }^{14}$ described the synthesis of 2-thiouracils from
alkoxymethylene compounds and thiourea. Now we report the synthesis of 5-cyano-6-methyl-4-oxo-2-thioxo-1,2,3,4-tetrahydropyrimidine (18) from thiourea and ethyl 2-cyano-3ethoxybutenoate (17) by regioselective cyclization at the alkoxycarbonyl group.

Scheme 12

17

$\xrightarrow[\text { b) } \mathrm{H}_{3} \mathrm{O}^{+}]{\text {a) } \mathrm{NaOC}_{2} \mathrm{H}_{5} / \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}}$
$\qquad$

18

These results are at variance with those described in the literature ${ }^{15}$ concerning the reaction of thiourea with ethyl 2-cyano-3-ethoxypropenoate, which yields the 4-amino-5-ethoxycarbonyl-2-thioxo-1,2-dihydropyrimidine as the major product of the reaction.

From these results and the ones obtained from the reaction with benzamidine, we can conclude that the regioselectivity of the cyclization in these processes is not controlled by stereoelectronic factors but rather from the geometry of the carbon-carbon double bond of the intermediate. The steric hindrance between the phenyl (or methyl) and the ethoxycarbonyl functions favors the Zconfiguration of the intermediary condensation products and subsequent cyclization with this group to afford the corresponding 4-oxopyrimidine.

## EXPERIMENTAL

All melting points were determined on a Büchi SMP-20 or Electrothermal IA 6304 (for mps above $260^{\circ} \mathrm{C}$ ) and are uncorrected. Ir spectra were recorded on a Perkin Elmer 883 spectrophotometer. Nmr spectra were performed on a Varian Unity at 300 MHz . Mass spectra were obtained on a Hewlett Packard HP-5988 at 70eV. Microanalyses were performed on a Perkin Elmer 240. Flash
column chromatography was carried out on silica gel SDS 230-400 mesh.
Methyl 3-benzamido-2-cyano-3-methylthiopropenoate (5) was obtained according the reported procedure. ${ }^{16}$

Methyl (Z)-2-Cyano-3-phenyl-3-thiobenzamidopropenoate (2a):To a stirred suspension of $80 \%$ sodium hydride ( $90 \mathrm{mg}, 3 \mathrm{mmol}$ ) in dry dimethylformamide ( 20 ml ), thiobenzamide ( 274 $\mathrm{mg}, 2 \mathrm{mmol}$ ) and methyl 2-cyano-3-methoxy-3-phenylpropenoate (1) ( $434 \mathrm{mg}, 2 \mathrm{mmol}$ ) were added. The mixture was stirred at room temperature for 7 days and then concentrated to dryness. The residue thus obtained was dissolved in the minimal volume of ethanol and acidified with $2 \%$ hydrochloric acid. The solution was extracted with dichloromethane and the combined extracts washed with water. The residue obtained after concentration of the organic extracts was treated with hexane affording a solid which was recrystallized from ethanol. Yield 327 mg (51\%); mp 148$150^{\circ} \mathrm{C}$; ir ( KBr ) $\cup 3229(\mathrm{~N}-\mathrm{H}), 2211(\mathrm{C} \equiv \mathrm{N}), 1696(\mathrm{C}=0) \mathrm{cm}^{-1} ;{ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}_{\mathrm{d}}^{6}\right): \delta 3.78(\mathrm{~s}, 3 \mathrm{H}$, $\mathrm{CO}_{2} \mathrm{CH}_{3}$ ), 7.41-7.51 (m,5H, arom), 7.55-7.87 (m, 5H, arom), $12.20(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}) ; \mathrm{ms} \mathrm{m} / \mathrm{z}: 322\left(\mathrm{M}^{+}\right.$, $4 \%$ ), 264 (26), 263 (100), 121 (46), 105 (17), 77 (31). Methyl (Z)-3-Benzamido-2-cyano-3-phenylpropenoate (2b): To a suspension of $\mathbf{8 0 \%}$ sodium hydride ( $180 \mathrm{mg}, 6 \mathrm{mmol}$ ) in dry dimethylformamide ( 20 ml ), benzamide ( $484 \mathrm{mg}, 4 \mathrm{mmol}$ ) and methyl 2-cyano-3-methoxy-3-phenylpropenoate (1) ( $868 \mathrm{mg}, 4 \mathrm{mmol}$ ) were added. The reaction mixture was stirred at room temperature for 72 h and then the solvent was removed at reduced pressure. The residue thus obtained was dissolved in ice-water and acidified with $10 \%$ hydrochloric acid. The precipitate formed was filtered and purified by flash column (diameter: 3 cm ) chromatography using hexane-ethyl acetate ( $1 / 1, \mathrm{v} / \mathrm{v}$ ) as eluent. The product obtained was recrystallized from ethanol affording $717 \mathrm{mg}(61 \%)$ of 2 b ; mp $152-153^{\circ} \mathrm{C}$; ir ( KBr ) v $3225(\mathrm{~N}-\mathrm{H})$, $2222(\mathrm{C} \equiv \mathrm{N}), 1715(\mathrm{C}=\mathrm{O}), 1688(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1}{ }^{1}{ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}-\mathrm{d}_{6}\right): \delta 3.82\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right)$, 7.477.62 (m, 7H, arom), 7.68-7.72 (m, 1 H, arom), 7.93-7.96 (m, 2 H , arom), 12.00 ( $\mathrm{s}, 1 \mathrm{H}, \mathrm{NH}$ ); ms m/z: $306\left(\mathrm{M}^{+}, 16 \%\right), 247(20), 106(14), 105(100), 104(12), 77(79)$. Methyl 3-Amino-2-cyano-3-phenylpropenoate: A solution of 2b ( $200 \mathrm{mg}, 0.68 \mathrm{mmol}$ ) in dry methanol ( 20 ml ) was refluxed for 86 h and then concentrated to dryness. The residue thus obtained was purified by flash column (diameter: 2 cm ) chromatography using hexane-ethyl acetate ( $2 / 1, \mathrm{v} / \mathrm{v}$ ) as eluent affording a solid which was recrystallized from hexane-ethyl acetate. Yield $65 \mathrm{mg}(47 \%)$; mp $182-183^{\circ} \mathrm{C}$ (iit., ${ }^{5} 182^{\circ} \mathrm{C}$ ).

## 5-Methoxycarbonyl-6-methylthio-4-ox0-2-phenyl-3,4-dihydropyrimidine (6): A

 solution of 5 ( $262 \mathrm{mg}, 0.95 \mathrm{mmol}$ ) in dry methanol ( 30 ml ) was refluxed for 3 days and then the precipitate was filtered. By continuing the reflux for 4 days, an additional amount of product was obtained. Combined solids were recrystallized from ethanol affording $197 \mathrm{mg}(75 \%)$ of 6 ; mp 288$289{ }^{\circ} \mathrm{C}$ (lit., ${ }^{16} 285{ }^{\circ} \mathrm{C}$ ).Dimethyl 1-Methoxy-1-phenylmethylenemalonate (7): To a mechanically stirred suspension of finely divided sodium (previously melted in xylene) ( $5.97 \mathrm{~g}, 0.26 \mathrm{~mol}$ ) in dry ether ( 350 ml ) and dry methanol ( 3 ml ), dimethyl malonate ( $29 \mathrm{ml}, 0.25 \mathrm{~mol}$ ) was added dropwise. Subsequently freshly distilled benzoyl chloride ( $40 \mathrm{ml}, 0.345 \mathrm{~mol}$ ) was allowed to drop into the reaction mixture with stirring, which was then refluxed for 4 h . The reaction mixture was then extracted with water ( 200 ml ) and $3 \times 100 \mathrm{ml}$ of 1 N NaOH . The aqueous layer was acidified with $10 \%$ hydrochloric acid and extracted with $3 \times 100 \mathrm{ml}$ of ether. The combined extracts were dried over magnesium sulfate and evaporated, affording 31.8 g (54\%) of dimethyl benzoylmalonate (tautomeric mixture carbonylic: enolic ca., 80:20) which was recrystallized from hexane; mp 41-42 ${ }^{\circ} \mathrm{C}$; ir (film): v $1737(\mathrm{C}=\mathrm{O}), 1692(\mathrm{C}=\mathrm{O})^{\prime} \mathrm{cm}^{-1} ;{ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{CDCl}_{3}\right): \delta 3.57\left(\mathrm{~s}, 6 / 10 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right), 3.80$ (s, $48 / 10 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}$ ), 3.87 (s, $6 / 10 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}$ ), 5.34 (s, $8 / 10 \mathrm{H}, \mathrm{CH}$ ), 7.41-7.62 (m, 34/10H, arom), 7.91 (d, J= $7.32 \mathrm{~Hz}, 16 / 10 \mathrm{H}$, arom), 13.37 (s, 2/10H, OH); ms m/z: $236 \mathrm{M}\left(\mathrm{M}^{+}, 9 \%\right), 203(3), 204$ (3), 122 (10), 106 (18), 105 (100), 77 (77).

To a solution of dimethyl benzoylmalonate ( $15.9 \mathrm{~g}, 73.6 \mathrm{mmol}$ ) in dry ethyl acetate ( 100 ml ) kept in
an ice bath, a solution of diazomethane (prepared from Diazald ( $26.9 \mathrm{~g}, 125 \mathrm{mmol}$ ) ) in ether ( 250 $\mathrm{ml})$ was added dropwise. The reaction mixture was stirred at room temperature for 12 h and then dried with magnesium sulfate. Evaporation of the solvent and recrystallization of the residue from 2-propanol yielded $6.7 \mathrm{~g}(37 \%)$ of product; $\mathrm{mp} 96-97^{\circ} \mathrm{C}$; ir ( KBr ): v $1720 \mathrm{~cm}^{-1}$; ${ }^{1} \mathrm{H} \mathrm{nmr}$ (acetone$\mathrm{d}_{6}$ ): $\delta 3.42\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{OCH}_{3}\right), 3.51\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right), 3.74\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right), 7.38-7.40(\mathrm{~m}, 2 \mathrm{H}$, arom), 7.47-7.50 (m, 3H, arom); ms m/z: 250 ( $\mathrm{M}^{+}, 50 \%$ ), 219 (93), 191 (100), 161 (27), 159 (20), 151 (51), 129 (45), 105 (58), 103 (19), 102 (76), 91 (19), 89 (19), 77 (49). Anal. Calcd for $\mathrm{C}_{13} \mathrm{H}_{14} \mathrm{O}_{5}$ : C, 62.39; H, 5.64. Found: C, 62.50; H, 5.51 .

Dimethyl 1-Phenyl-1-thioacetamidomethylenemalonate (8): To a stirred suspension of $80 \%$ sodium hydride ( $150 \mathrm{mg}, 5 \mathrm{mmol}$ ) in dry dimethylformamide ( 30 ml ), thioacetamide ( 300 mg , 4 mmol ) and dimethyl 1-methoxy-1-phenylmethylenemalonate ( $1 \mathrm{~g}, 4 \mathrm{mmol}$ ) were added. The reaction mixture was stirred at room temperature for 24 h and then the solvent was removed in vacuo. The oily residue thus obtained was dissolved in water cooled to $0^{\circ} \mathrm{C}$ and acidulated with $2 \%$ hydrochloric acid. By extraction with dichloromethane and purification by flash column (diameter: 3 cm ) chromatography using hexane-ethyl acetate ( $12 / 1, \mathrm{v} / \mathrm{v}$ ) as eluent an oily product was obtained which on trituration with hexane affords a solid. Yield $304 \mathrm{mg}(26 \%) ; \mathrm{mp} 86-87{ }^{\circ} \mathrm{C}$ (hexane); ir ( KBr ) v $3297(\mathrm{~N}-\mathrm{H}), 1722(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1}$; ${ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}_{6}\right): \delta 2.43\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 3.47$ ( $\mathrm{s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}$ ), 3.77 ( $\mathrm{s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}$ ), 7.41 ( $\mathrm{s}, 5 \mathrm{H}$, arom), 11.35 ( $\mathrm{brs}, 1 \mathrm{H}, \mathrm{NH}$ ); ms m/z: $293\left(\mathrm{M}^{+}\right.$, $4 \%$ ), 234 (100), 202 (64), 133 (29), 129 (36), 105 (39), 104 (25), 102 (22), 89 (21), 77 (40). Anal. Calcd for $\mathrm{C}_{14} \mathrm{H}_{15} \mathrm{NO}_{4} \mathrm{~S}: \mathrm{C}, 57.32 ; \mathrm{H}, 5.15 ; \mathrm{N}, 4.77$. Found: $\mathrm{C}, 57.48 ; \mathrm{H}, 5.21 ; \mathrm{N}, 4.41$.

Dimethyl 1-Benzamido-1-phenylmethylenemalonate (9): To a suspension of $80 \%$ sodium hydride ( $60 \mathrm{mg}, 2 \mathrm{mmol}$ ) in dry dimethylformamide ( 30 ml ), benzamide ( $182 \mathrm{mg}, 1.5 \mathrm{mmol}$ ) and dimethyl 1-methoxy-1-phenylmethylenemalonate ( $375 \mathrm{mg}, 1.5 \mathrm{mmol}$ ) were added. After stirring at room temperature for 24 h the solvent was removed at reduced pressure and the concentrate dissolved in water. Neutralization with $2 \%$ hydrochloric acid gave a solid precipitate which was filtered. The filtrate was extracted with dichloromethane and the combined organic phases were washed three times with water, dried over magnesium sulfate and concentrated to dryness affording an additional amount of product. Both fractions of product were purified by flash column (diameter: 3 cm ) chromatography with hexane-ethyl acetate ( $2 / 1, \mathrm{v} / \mathrm{v}$ ) as eluent yielding 259 mg ( $51 \%$ ) of 9 which was recrystallized from hexane-ethyl acetate; mp $108-109{ }^{\circ} \mathrm{C}$; ir ( KBr ) $\mathrm{v}^{2} 3219$
$(\mathrm{N}-\mathrm{H}), 1730(\mathrm{C}=\mathrm{O}), 1705(\mathrm{C}=\mathrm{O}), 1665(\mathrm{CONH}) \mathrm{cm}^{-1} ;{ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}_{6}\right): \delta 3.40\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right)$, $3.81\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right), 7.39(\mathrm{~s}, 5 \mathrm{H}$, arom), 7.57-7.66 (m, 3H, arom), 7.95-7.98 (m, 2H, arom), 11.80 (s, 1H, NH); ms m/z: $339\left(\mathrm{M}^{+}, 8 \%\right), 281$ (17), 280 (97), 105 (100), 104 (11), 77 (77). Anal. Calcd for $\mathrm{C}_{19} \mathrm{H}_{17} \mathrm{NO}_{5}$ : C, 67.25; H, 5.05; N, 4.13. Found: C, 67.43 ; $\mathrm{H}, 5.11$; $\mathrm{N}, 4.33$.

Dimethyl 1-Methylthio-3-thioacetamidomethylenemalonate (11): To a suspension of $80 \%$ sodium hydride ( $240 \mathrm{mg}, 8 \mathrm{mmol}$ ) in dry dimethylformamide ( 30 ml ), thioacetamide ( 300 mg , 4 mmol ) and dimethyl bis(methylthio)methylenemalonate ( $945 \mathrm{mg}, 4 \mathrm{mmol}$ ) were added. The reaction mixture was stirred at room temperature for 72 h and then the solvent was removed in vacuo. The residue thus obtained was dissolved in water, acidified at $0^{\circ} \mathrm{C}$ with $2 \%$ hydrochloric acid and extracted with dichloromethane. The residue obtained by concentration of the combined organic extracts was purified by flash column (diameter: 3 cm ) chromatography using hexaneethyl acetate ( $2 / 1, \mathrm{v} / \mathrm{v}$ ) as eluent. The oily product obtained was triturated with hexane-ethyl acetate affording a solid which was recrystallized from ethyl acetate. Yield 263 mg ( $25 \%$ ); mp 129$131^{\circ} \mathrm{C}$; ir ( KBr ) v $3190(\mathrm{~N}-\mathrm{H}), 1708(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1} ;{ }^{1} \mathrm{H} \mathrm{nmr}\left(\right.$ acetone-d $\left._{6}\right): \delta 2.33\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 2.60$ (s, 3H, $\mathrm{SCH}_{3}$ ), $3.68\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CO}_{2} \mathrm{CH}_{3}\right.$ ), 3.75 (s, 3H, $\mathrm{CO}_{2} \mathrm{CH}_{3}$ ), $10.45(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}$ ); ms (CI) m/z: 264 $\left(M^{+}+1, .96 \%\right), 248(117), 234(11), 233(11), 232(100), 218(15), 216(17), 200(20), 158(12), 89$ (92). Anal. Calcd for $\mathrm{C}_{9} \mathrm{H}_{13} \mathrm{NO}_{4} \mathrm{~S}_{2}: \mathrm{C}, 41.05 ; \mathrm{H}, 4.98$; $\mathrm{N}, 5.32$. Found: $\mathrm{C}, 41.26 ; \mathrm{H}, 4.73 ; \mathrm{N}, 5.71$. 5-Cyano-4-oxo-2,6-diphenyl-3,4-dihydropyrimidine (12): To a solution of sodium (100 $\mathrm{mg}, 4.35 \mathrm{mmol}$ ) in dry methanol ( 40 ml ), methyl 2-cyano-3-methoxy-3-phenylpropenoate (1) (434 $\mathrm{mg}, 2 \mathrm{mmol}$ ) and benzamidine hydrochloride ( $313 \mathrm{mg}, 2 \mathrm{mmol}$ ) were added. After 48 h stirring at room temperature the reaction mixture was poured into ice-water ( 200 ml ) and neutralized with $10 \%$ hydrochloric acid. The colorless precipitate was filtered and recrystallized from methanol affording $382 \mathrm{mg}(70 \%)$ of 12 ; mp $350-354^{\circ} \mathrm{C}$ (lit.,,$^{17} 350-356{ }^{\circ} \mathrm{C}$ ).

5-Cyano-6-methoxy-4-ox0-2-phenyl-3,4-dihydropyrimidine (13):To a solution of sodium ( $40 \mathrm{mg}, 1.74 \mathrm{mmol}$ ) in dry methanol ( 40 ml ), methyl 3,3-bis(methylthio)-2-cyanopropenoate (157 $\mathrm{mg}, 0.77 \mathrm{mmol}$ ) and benzamidine hydrochloride ( $156 \mathrm{mg}, 0.77 \mathrm{mmol}$ ) were added. The reaction mixture was stirred at room temperature for 5 h and then concentrated to dryness. The resulting residue was treated with water ( 40 ml ) and the solution acidified with $20 \%$ hydrochloric acid affording a colorless solid which was recrystallized from methanol yielding $106 \mathrm{mg}(61 \%)$ of 13 ;
mp 280-281 ${ }^{\circ} \mathrm{C}$; ir ( KBr ) v $3419(\mathrm{~N}-\mathrm{H}), 2223(\mathrm{C}=\mathrm{N}), 1660(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1}$; ${ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}_{6}\right): \delta 4.11$ (s, 3H, $\mathrm{OCH}_{3}$ ), 7.54-7.68 (m, 3H, arom), 8.18-8.22 (m, 2H, arom), 13.5 (br s, 1H, NH); ms m/z 228 $\left(\mathrm{M}^{+}+1,15 \%\right), 227\left(\mathrm{M}^{+}, 93\right), 226(29), 198(15), 169(6), 144(20), 104(100), 77(32)$. Anal. Calcd for $\mathrm{C}_{12} \mathrm{H}_{9} \mathrm{~N}_{3} \mathrm{O}_{2}$ : C, 63.43; $\mathrm{H}, 3.99 ; \mathrm{N}, 18.49$. Found: $\mathrm{C}, 63.27$; $\mathrm{H}, 4.11 ; \mathrm{N}, 18.70$.

## Reactivity of Ethyl 2-Cyano-3-ethoxypropenoate (14) with Benzamidine. Synthesis

 of 15 and 16: To a solution of sodium ( $184 \mathrm{mg}, 4 \mathrm{mmol}$ ) in dry ethanol ( 40 ml ), 14 ( $644 \mathrm{mg}, 4$ mmol ) and benzamidine hydrochloride ( $626 \mathrm{mg}, 4 \mathrm{mmol}$ ) were added. The reaction mixture was stirred at room temperature for 24 h and then the solvent was removed in vacuo. The resulting residue was treated with water ( 70 ml ) broken up in an ultrasonic bath and filtered yielding 210 mg (22\%) of 15 ; mp $115-116^{\circ} \mathrm{C}$ (hexane) (lit., ${ }^{18} 115{ }^{\circ} \mathrm{C}$ ).The filtrate was acidified with $10 \%$ hydrochloric acid affording a colorless precipitate which was filtered and recrystallized from methanol yielding 240 mg ( $31 \%$ ) of $16 ; \mathrm{mp} \mathrm{302-304}{ }^{\circ} \mathrm{C}$ (lit., ${ }^{18}$ > $300^{\circ} \mathrm{C}$ ).

5-Cyano-6-methyl-4-0x0-2-thioxo-1,2,3,4-tetrahydropyrimidine (18): To a solution of sodium ethoxide in dry ethanol ( 40 ml ) prepared from sodium ( $92 \mathrm{mg}, 4 \mathrm{mmol}$ ), thiourea ( 305 mg , 4 mmol ) and ethyl 2-cyano-3-ethoxybutenoate (17) ( $732 \mathrm{mg}, 4 \mathrm{mmol}$ ) were added. The reaction mixture was refluxed for 2.5 h and then concentrated to dryness. The residue thus obtained was dissolved in ice-water and neutralized with $5 \%$ acetic acid. The precipitate formed was filtered and recrystallized from $50 \%$ acetic acid affording $550 \mathrm{mg}(82 \%)$ of 18 ; mp $270-272{ }^{\circ} \mathrm{C}$; ir ( KBr ) v 3519 and $3435(\mathrm{~N}-\mathrm{H}), 2238(\mathrm{C}=\mathrm{N}), 1661(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1}$; ${ }^{1} \mathrm{H} \mathrm{nmr}\left(\mathrm{DMSO}^{-d_{6}}\right.$ ): $\delta 2.29\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 11.80(\mathrm{br}$ $\mathrm{s}, 2 \mathrm{H}, \mathrm{NH}) ; \mathrm{ms} \mathrm{m} / \mathrm{z} 168\left(\mathrm{M}^{+}+1,12 \%\right), 167\left(\mathrm{M}^{+}, 100\right), 109(44), 108(12), 68(10), 67(12), 59(13)$. Anal. Calcd for $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{~N}_{3} \mathrm{OS}: \mathrm{C}, 43.11 ; \mathrm{H}, 3.01$; $\mathrm{N}, 25.13$. Found: $\mathrm{C}, 43.33 ; \mathrm{H}, 3.11 ; \mathrm{N}, 24.87$.

X-Ray crystallography
Crystallographic and experimental details for the X-Ray crystal structure determination are given in Table 2. Data were collected at room temperature. Intensities were corrected for Lorentz polarization effects in the usual manner. No absorption or extinction corrections were made. The structure was solved by a combination of direct methods and Fourier synthesis.

The structure of compound $\mathbf{2 a}$ was refined on $F$ by full-matrix least-squares calculations. All the non-hydrogen atoms were refined anisotropically. In the later stages of refinement the hydrogen
atoms were included in calculated positions with thermal parameters equivalent to those of the atoms to which they are attached, and in the last cycle of refinement their parameters were fixed. Final values of $R=0.079$ and $R w=0.065$ (non-Poison weighting scheme for all observed reflections) were obtained.

Anomalous dispersion corrections and atomic scattering factors were taken from International Tables. ${ }^{19}$ Calculations were performed with the SDP package ${ }^{20}$ and the programs MULTAN ${ }^{21}$ and DIRDIF ${ }^{22}$ on a Microvax II computer.
